Response to argument

Applicant's arguments filed 6/14/05 have been fully considered but they are not persuasive.

Applicant argues that Smelker fails to disclose a secondary feedback circuit connected to the primary feedback circuit.

Examiner respectfully disagrees.

Smelker clearly discloses that the secondary feedback circuit (107) connected to the primary feedback circuit (105) (through Va+ to Vd+) (See Figure 2).

Claim Rejections – 35 U.S.C. 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 12 is rejected under 35 U.S.C. 102(b) as being anticipated by Smelker (6,207,943).

Regarding Claim 12, Smelker discloses an illumination system comprising:

- a primary sub-system including a primary driving circuit (controller 108), a primary light tube (100a), a primary photosensitive element (104a) and a primary feedback circuit (105) connected in series, and
- at least one secondary sub-system including a secondary driving circuit (inverter 109), a second light tube (100b), a secondary photosensitive element (104b) and a secondary feedback circuit (107) connected in

series, wherein the primary feedback circuit (105) is linked to a secondary feedback circuit (107).

Allowable subject matter

Claims 1-11 and 13 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art neither discloses nor suggests the following limitations, in combination with the remaining elements disclosed in claim 1 and 13:

- the primary feedback circuit receives the photoelectric current of a corresponding photosensitive element and provides an output signal to the primary driving circuit, and the secondary feedback circuit receives at least two photoelectric currents of said photosensitive elements and provides at least an output signal to the secondary driving circuit in order to keep the brightness of said secondary light tube the same as the brightness of the primary light tube as required by claim 1;
- the primary sub-system and said at least one secondary sub-system are mainly separate from each other except the secondary feedback circuit is also influenced by the primary sub-system for obtaining consistent illumination between the primary sub-system and the secondary sub-system as required by claim 13.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
